

The map below show the changes that occurred to a town named Willington in 1780, 1860 and 2000. Summarise the information by selecting and reporting the main features and make comparisons where relevant.

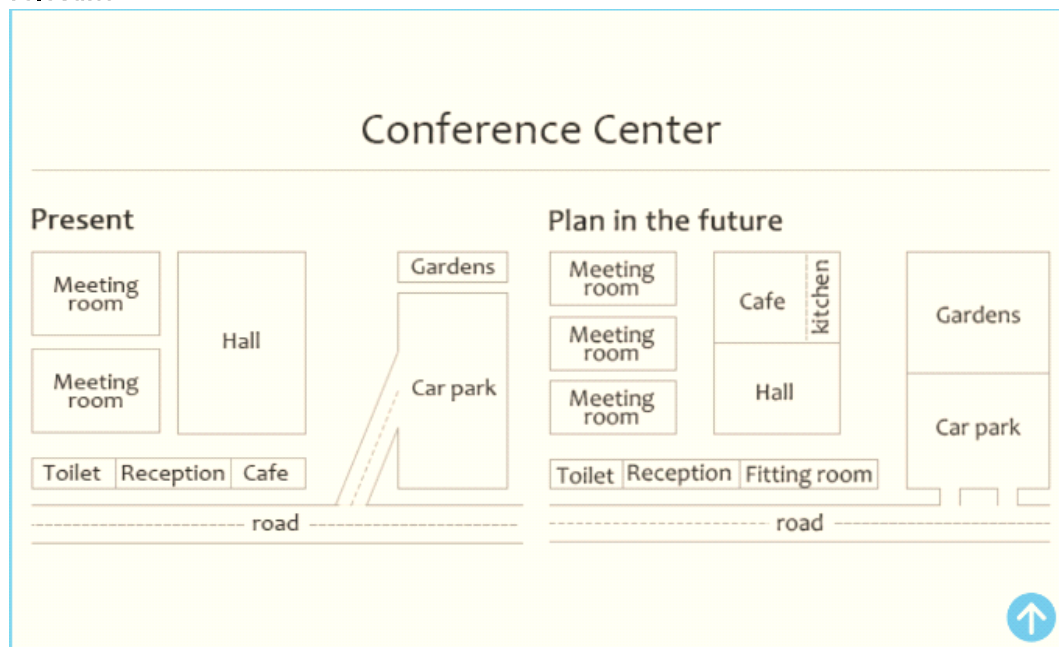

Various changes occurred in the town of Willington in 1780, 1860, and the year 2000. These changes are shown in the different maps above.

In the first map, dated 1780, Willington was covered by mostly woodlands and farms. A river ran along the west side of the town and the town itself had only 100 homes. Developments were made in 1860. Firstly, Willington's homes increased to 200. To reach the homes, a bridge was constructed over the river. A road was also built to connect the nearby bridge and the homes. Some of the farms and woodlands were removed to accommodate these changes.

By the year 2000, Willington's homes increased again by 300. Shops were constructed by the side of the river and another road was built to connect the homes to a newly built school and sports fields in the southeast of the town. There were no more farms and woodlands around Willington town. Instead, there was a wetland for birds at the southern end of the river.

Comparing the maps drawn during different times, more modernized changes occurred in Willington town as the years went by.

The maps below show a conference center as it is now, and plans for its development. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

The maps present the current layout of a conference center and the possible changes that might happen in the future.

According to the construction plan, the area for two meeting rooms will be divided into three meeting rooms but all the rooms are of the same size. The hall near the meeting rooms is planned to shrink to the half of its original size as a café and a kitchen will take up the extra space. Further down to the south, the toilet and reception desk will be the same but a new fitting room will replace the old café bar.

Outside the center, the gardens near the car park will expand in size whereas the car park will be smaller. Also the lane that connects the parking area and the road will not exist in the future.

Overall, a large part of the conference center will be rearranged and changed for the future development.

The maps below show a museum and its surroundings in 1990 and the changes in 2010. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

The maps above illustrate the changes that happened to a museum in 2010 compared with its old layout in 1990.

We can clearly see that the cottage in the southwestern corner had been replaced by a coffeehouse, but the size of the coffeehouse was smaller than that of the cottage. The shop to the north of the cottage then expanded and took up some space of the exhibition area. The store right next to the exhibition area also had an expansion in size.

In the eastern part of the museum, there used to be one big car park and a garden, but 20 years later the garden near the car park was turned into another place for car parking. Besides, the exit of the museum was changed to the other side near the new car park. The garden in the north side had added more trees by 2010.

Overall, the path in the middle as well as the large car park remained the same, but other areas had witnessed changes.
